HealthPax is a Cranial Electrotherapy Stimulation (CES) device for the control of anxiety, depression and insomnia that has been reviewed and is deemed in compliance with FDA regulations. Stress takes many forms and many of them are relieved when CES is used 1-2 times a day for an hour. Unlike pharmaceuticals, there are no adverse interactions and virtually no side effects. CES has been the subject of many university based controlled research studies which have proven it to be very beneficial. For specific questions about the research please contact **Dr. Diane** at the phone number or email address above.

*CES kits are available for patients who have a prescription from their healthcare practitioner.

*Healthcare professionals may order the CES kit through this website.
